# Practical Portfolio Performance Measurement & Attribution, 2nd edition – Table of Contents

## Acknowledgements
- Initial fees

## 1 Introduction
- Portfolio component returns
- Component weight
- Short positions
- Overlay strategies
- Carve-outs
- Multi-period component returns

## 2 The Mathematics of Portfolio Return
- Simple return
- Money-weighted returns
- Internal rate of return (IRR)
- Simple internal rate of return
- Modified internal rate of return
- Simple Dietz
- ICAA method
- Modified Dietz
- Time-weighted returns
- True time-weighted
- Unit price method
- Time-weighted versus money-weighted rates of return
- Approximations to the time-weighted return
- Index substitution
- Regression method (or β method)
- Analyt’s test
- Hybrid methodologies
- Linked modified Dietz
- BAI method (or linked IRR)
- Which method to use?
- Self-selection
- Annualised returns
- Return hiatus
- Continuously compounded returns
- Gross- and net-of-fee calculations
- Estimating gross- and net-of-fee returns

## 3 Benchmarks
- Base currency and local returns
- Benchmarks
- Benchmark attributes
- Commercial indexes
- Calculation methodologies
- Aggregate price index (price-weighted index)
- Geometric (or Jevons-type) index
- Market capitalisation index
- Laspeyres index
- Paasche index
- Marshall–edgeworth index
- Fisher index
- Equal-weighted indexes
- Fundamental indexes
- Currency effects in benchmark
- Hedged indexes
- Customised (or composite) indexes
- Fixed weight and dynamised benchmarks
- Capped indexes
- Blended (or spliced) indexes
- Money-weighted benchmarks
- Benchmark statistics
- Index turnover
- Up capture indicator
- Down capture indicator
- Up number ratio

## 4 Risk
- Down number ratio
- Up percentage ratio
- Down percentage ratio
- Percentage gain ratio
- Peer groups and universes
- Percentile rank
- Random portfolios
- Normal funds
- Growth and value
- Excess return
- Arithmetic excess return
- Geometric excess return
- Performance fees
- Symmetrical performance fees (or fulcrum fees)
- Asymmetrical performance fees
- Performance fee structures
- Sliding scale
- Performance fee caps
- Hurdle rate
- Crystallisation
- High water mark
- Equalisation
- Definition of risk
- Risk management versus risk control
- Risk aversion
- Risk measures
- Ex post and ex ante
- Variability
- Mean absolute deviation
- Variance
- Standard deviation
- Frequency and number of data points
Which risk measures to use?
- Risk efficiency ratio
- Fund rating systems
- Risk control structure

5 Performance Attribution

5.1 Arithmetic attribution
- Brinson, Hood and Beebower
- Asset allocation
- Security (or stock) selection
- Interaction
- Brinson and Fachler

5.2 Geometric excess return attribution
- Asset allocation
- Stock selection
- Sector weights

6 Multi-currency Attribution
- Ankrim and Hensel
- Karnosky and Singer
- Geometric multi-currency attribution
- Naïve currency attribution
- Compounding effects
- Geometric currency allocation
- Currency timing
- Interest rate differentials
- Revised currency allocation
- Revised country allocation
- Incorporating forward currency contracts
- Other currency issues

7 Fixed Income Attribution
- The yield curve
- Yield to maturity (or gross redemption yield)
- Coupon yield curve
- Par yield curve
- Zero-coupon (or spot) curve
- Wagner and Tito
- Weighted duration attribution
- Geometric fixed income attribution
- Campisi framework
- Yield curve analysis
- Shift
- Twisted (or slope)
- Curvature (or butterfly)
- Carry
- Credit (or spread)
- Yield curve decomposition

8 Multi-period Attribution
- Smoothing algorithms
- Carino
- Menchero
- GRAP method
- Frongello
- Davies and Laker
- Multi-period geometric attribution
- Annualisation of excess return
- Attribution annualisation

9 Further Attribution Issues
- Attribution variations
- Contribution analysis (or absolute return attribution)
- Return (or regression)-based attribution
- Holding-based (or buy/hold) attribution
- Transaction-based attribution
- Security-level attribution
- Transaction costs
- Off-benchmark (or zero-weight sector) attribution
- Multi-level attribution
- Balanced attribution
- Lookthrough attribution (or fund of funds attribution)
- Attribution standards
- Evolution of performance attribution methodologies
- Risk-adjusted attribution
- Selectivity

10 Performance Measurement for Derivatives
- Futures
- Equity index future
- Libor (London Interbank Offered Rate)
- Attribution including equity index futures
- Leverage (or gearing)
- Forward foreign exchange (FFX) contract (or currency forward)
- Swaps
- Interest rate swaps
- Total return swap
- Credit default swap
- Equity index swaps
- Contracts for difference (CFD)
- Options
- Option price sensitivity (the Greeks)
- Warrants
- Convertible bonds
- Attribution analysis using options, warrants and convertible bonds
- Market neutral attribution
- Attribution for 130/30 funds (or extended short funds)

11 Performance Presentation Standards
- Why do we need performance presentation standards?
- Global Investment Performance Standards (GIPS®)
- Advantages for asset managers
- The standards
- Composites
- Presentation
